

How to use the **Energy Saver Pulse™** (ESP) Instructions do not apply to "Blue" ESP control pad

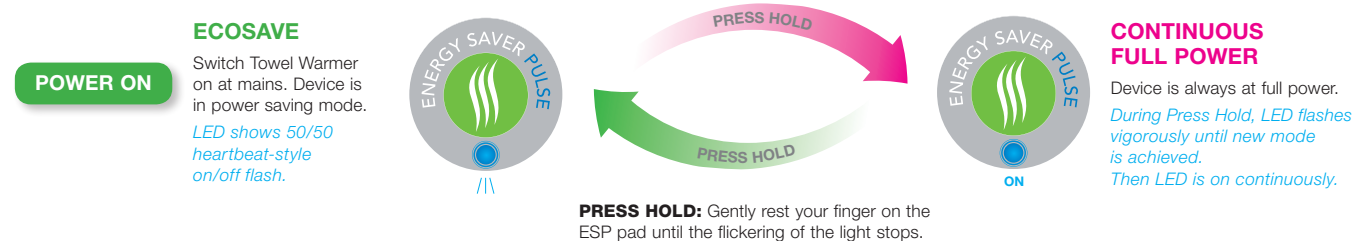

FOR NORMAL DAILY OPERATION

- 1 After switching the towel warmer on at the mains switch, it will (after a short delay) start in **ECOSAVE** mode to provide the full electricity benefits of ESP power savings.
- 2 From now on, after using your towel, all you need to do is touch the ESP pad to activate a full power **ECOBOOST** cycle.*
- 3 Your towel warmer will reset itself to **ECOSAVE** mode at the end of the 4 hour **ECOBOOST** cycle.
- 4 Therefore the next time you use your towel, simply repeat step 2 for another **ECOBOOST** cycle.

FOR CONTINUOUS OR FULL POWER OPERATION

- 1 To change from **ECOSAVE** to **CONTINUOUS FULL POWER** all the time, press hold the ESP touch pad.
(Important: Press hold your finger on the ESP touch pad until the indicator light stops flickering.)
- 2 When in **CONTINUOUS FULL POWER** mode you can return the towel warmer to **ECOSAVE** by a press hold of the ESP touch pad.

Warning! DO NOT drape towels over the ESP control pad. **Note:** During electrical work the unit must be turned off at its supply switch or at mains. The trademarks **Energy Saver Pulse** and **Heirloom ESP** are the property of Heirloom International Limited.

Congratulations on purchasing your new Heirloom Towel Warmer. We are sure you will enjoy the luxury of having snugly warm towels.

Designed for continuous use, this towel warmer is a **heating appliance** and should be treated as such. It is not intended for use by young children or infirm persons without supervision.

A towel warmer is designed to warm and assist the drying of towels and will normally operate at a temperature that is too hot for the warmer to be grasped for an extended time.

The heat of this unit will fluctuate according to the room temperature and may increase if overloaded with towels.

Care and Cleaning: Clean regularly with a damp cloth and gentle cleaning agent. Do not use harsh or ammoniated cleaners.

For over 25 years, Heirloom have been Australasian leaders in the design and production of towel warmers. We are respected for reliable, safe and proven element technology.

Heirloom offers peace of mind with:

All Heirloom towel warmers have an IP45 rating, allowing for safe installation, especially in bathrooms Zone 1, the area next to baths and showers.

Heirloom ESP™ controller is supported by a 2 year warranty.

Store this leaflet in a safe place for future use.

Heirloom ESP™ The first power-saving intelligent towel warmer.

**This world-first development features on
only selected Heirloom Towel Warmers.**

In these energy-conscious times, the careful use of electricity resources is becoming part of everyday life.

A heated towel warmer usually only uses as much electricity as a light bulb, but we have taken energy-efficiency a step further with Heirloom ESP.

Over time, the electricity saving made by Heirloom ESP will cover the cost of your heated towel warmer.
